## "Little Miracles" in the "Big Apple" (Part III)

I am continuing my review on the sample products that I received after my trip to New York City for CE Week a few weeks ago. While the products are quite useful and amazing in many respects, I must say that some do not really fall in the category of being a "little miracle". But my readers still deserve to be informed as to what the latest are in the consumer technology field.

### BELL'O DIGITAL BDH821 HEADPHONE

I have a collection of headphones and earphones. I go to the gym six times a week. I have used and tested them interchangeably. For convenience and comfort, I have used the "in-ear" earphones more often. Sometimes, I substitute the "out of ear" headphones especially when the "in-ear" earphones get to be irritating or when I want to be able to listen to my surroundings simultaneously.

I tried using my "over the ear" headphones to the gym as I did with the Bell'O BDH821 in order to test it for this review. Of course, as expected, compared to the "in-ear" earphones and "out of ear" headphones, nothing beats the Bell'O headphone in noise isolation. Even when compared to other "over the ear" headphones, it produces a nice warm sound output. I am particularly impressed with the way the bass is clearly and distinguishably incorporated that you could both hear and feel it as you raise the volume.

At home I have been using the Bell'O headphone for movie watching aside from listening to stereo music. I also asked my friends including musicians and guests at home to test it. All were unanimous in praising the headphone for the brilliant stereo performance in music delivery.

**They are even as impressed with the design and with the price when I told them that they could buy it retail for \$49.99.**

For the design, I am posting some photos of the Bell'O headphone. It is similar to what I am currently using.

**The bigger cups are supposed to deliver bigger and better sound. My experience indicates that they do. The cups ear cushions are very comfortable and deliver a sufficient amount of grip.**

As you can see in the picture, the hinge connecting the cups and headband is made from a very light and soft in touch plastic rubber.

**The reinforced cable is fabric-covered, which basically resists tangling and making it easier and quicker to manage.**

It also has an all-in-one control and good quality microphone, which enables the user to answer and end calls, skip and go back on tracks, and pause and play music.
